

AB-730 Transform Business Workflows with Generative AI

Course date: May 2026

Thank you for taking the time to join this session. Copilot is evolving every day, so please use this material as a point-in-time guide. We hope it supports your ongoing learning and helps you explore practical ways to use Copilot to improve your business workflows.

Introduction

- ✓ This session is designed for learners who already have a Microsoft 365 Copilot license.
- ✓ This session does not include lab-based practical exercises.
- ✓ The PowerPoint used in this session cannot be distributed due to copyright restrictions. However, you can review and extend your learning using the resource below.

[Microsoft Certified: AI Business Professional](#)

About Generative AI, Microsoft 365 Copilot, and Microsoft 365 Copilot Agents

Generative AI

Challenge

✓ In many business settings, a surprising amount of time is spent working out **where to start, how to organise ideas, and how to communicate them clearly to the right people.**

Approach

✓ Use **generative AI** as a partner to help you move work forward by **organizing your thinking**, exploring options, and drafting a starting point you can refine.

Microsoft 365 Copilot (paid license)

Challenge

- ✓ Emails, documents, and meeting notes are often spread across different places.
- ✓ It is easy to lose track of where information is stored.
- ✓ Finalising work can take more time than expected.

Approach

✓ Microsoft 365 Copilot is particularly useful for understanding **your own work** across Microsoft 365—such as Outlook emails, Word, PowerPoint and Excel files, and Teams chats and meetings—and helping you **summaries, rewrite, and organize next actions.**

Microsoft 365 Copilot Agents (focus in this session: Researcher and Analyst)

Challenge

- ✓ You may have gathered information already, but organizing it, comparing it, and interpreting it can still take a lot of time.
- ✓ Many situations require you to make judgements across multiple documents and data sources.
- ✓ Research and analysis can become too dependent on individual experience.

Approach

✓ Use the **Researcher and Analyst agents in Microsoft 365 Copilot** as tools that can take on part of the **thinking**

process.

Researcher:

Investigates and organizes information across multiple sources—both internal data and the web—and turns it into something useful for decision-making.

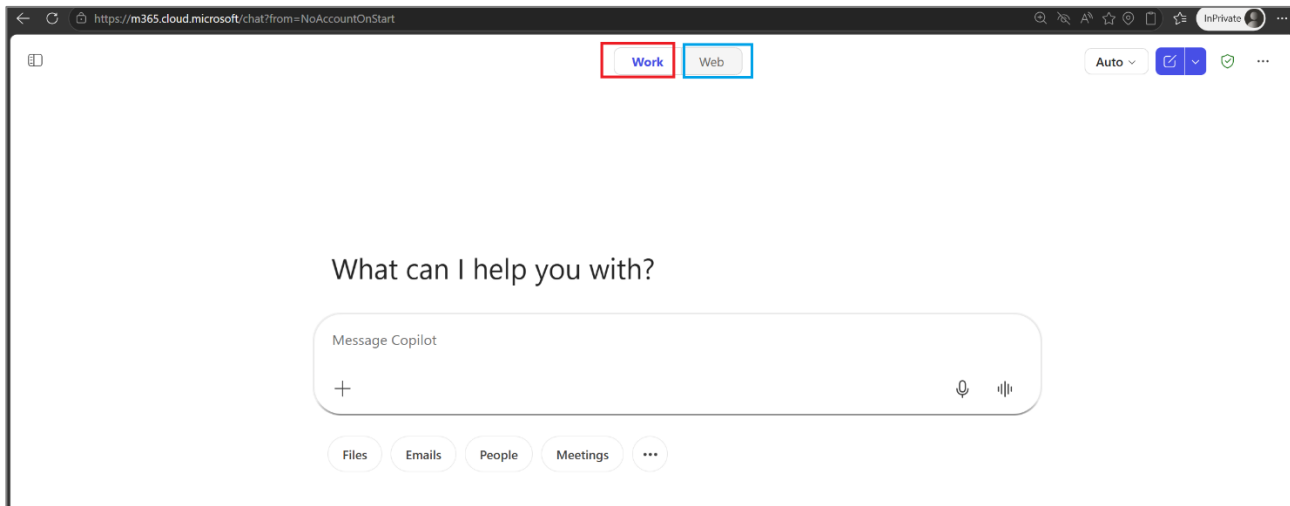

Analyst:

Interprets data and numbers to highlight trends, insights, and possible next steps.

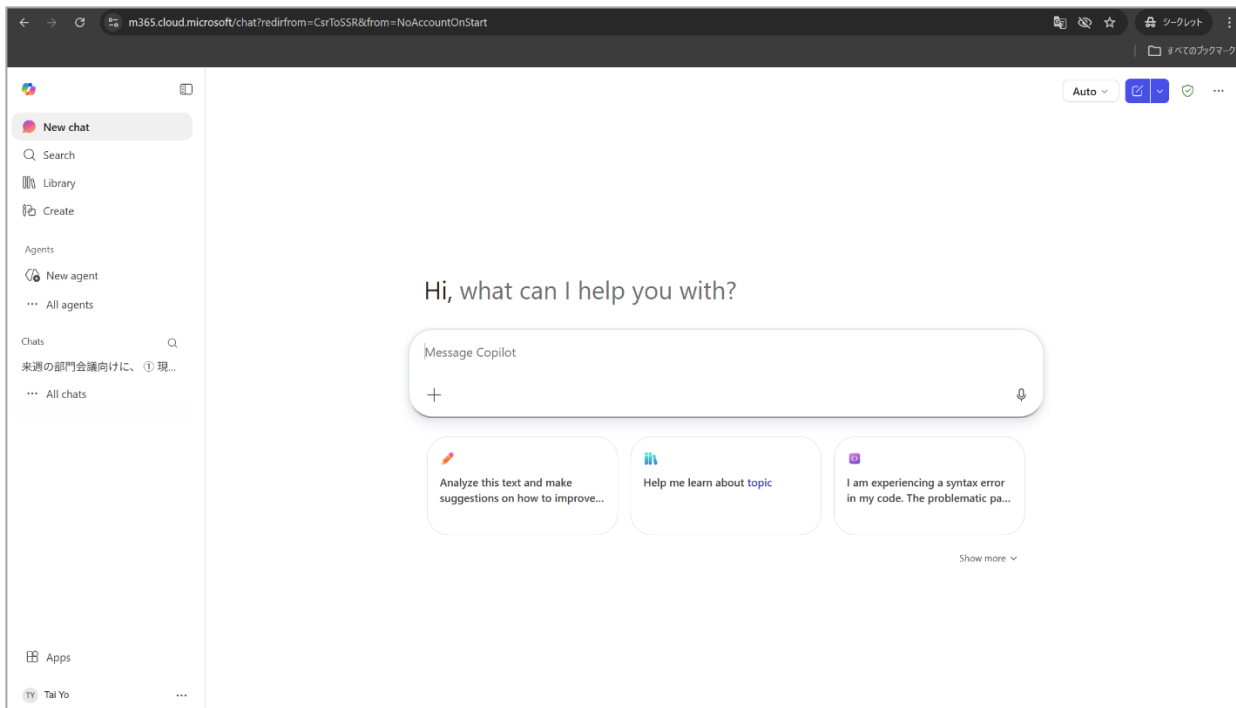

👉 When combined with Microsoft 365 apps such as Word, Excel, PowerPoint, and Teams, these agents can streamline the workflow of **researching → organising → deciding → communicating**.

Microsoft 365 Copilot Chat: Work mode and Web mode

In Microsoft 365 Copilot Chat, **Work** mode focuses on your organization's internal data, while **Web** mode can also draw on information from the internet.

For reference, if you do not have a Microsoft 365 Copilot license, the user interface (UI) will look like the example shown below.

About Responsible AI Principles

Responsible AI principles: fairness, reliability and safety, privacy and security, inclusiveness, transparency, and accountability.

Explained using a loan application example:

Principle	Overview	Business example
Fairness	Provide services fairly and without bias to all people.	Assess loan applicants using fair and consistent criteria.
Reliability and safety	Operate accurately and safely to reduce the risk of incorrect decisions.	A loan assessment AI includes safeguards to help prevent incorrect decisions.
Privacy and security	Protect personal information and manage data securely.	Encrypt applicants' information and apply strict access controls.
Inclusiveness	Design systems so they can be used by a diverse range of people.	Provide multilingual support for the loan application process.
Transparency	Make it clear how the AI works and why it makes decisions.	Share the loan assessment criteria and reasons for decisions with users.
Accountability	Take responsibility for how the AI is operated and for the outcomes it produces.	If the AI makes a mistake in loan assessment, senior leaders are responsible for explaining and addressing it.

Responsible AI in Microsoft 365 Copilot

- Microsoft 365 Copilot is designed to support work in a business context and is built in line with responsible AI principles.
- Because it is intended for enterprise use, it emphasizes grounded responses, content moderation, and privacy, security, and compliance measures such as access controls, encryption, and DLP.
- To support transparency, it is designed to help users understand how the AI works and the reasons behind its responses.
- From an accountability perspective, organizations should have arrangements in place so leaders can respond to and explain AI-assisted decisions and outcomes.
- In Copilot Chat, Web mode uses Bing web information, while Work mode uses organizational data through Microsoft Graph, helping support appropriate information use and responsible operation.

About Effective Prompts: How Better Prompts Change the Result

An effective prompt clearly explains the **context, goal, references, and expected output**. This helps Microsoft 365 Copilot Chat provide more accurate support and suggestions that better match your purpose.

Prompt 1: **I want to write a reminder for people who have not submitted a claim.**

Here's a **draft reminder email** you can use as a starting point. You can edit the tone, deadline, or details in Outlook before sending.

Subject

Reminder: Pending Claim Submission

Body

Hello,

This is a friendly reminder to submit your pending claim if you have not already done so. At this time, we have not yet received a completed claim from you.

Please submit the required claim as soon as possible so it can be processed without delay.

If you have already submitted your claim, please feel free to disregard this message.

If you have any questions or need assistance, don't hesitate to reach out.

Thank you for your cooperation.

Best regards,

Dakota

Prompt 2: I want to write an Outlook email reminder to people who have not submitted their **expense claim**. Please include that claims must be submitted by **15 April**, and mention that once the deadline has passed, even late submissions may not be approved. I want the tone to be as **polite and supportive as possible**, while still being clear enough to help employees avoid missing their expense reimbursement.

 Copilot

I've drafted a polite, supportive, and clear reminder email in Outlook for you.

Subject

Reminder: Expense Claim Submission Deadline – 15 April

Email body

Hello,

I hope this message finds you well.

This is a gentle reminder to please submit any outstanding expense claims by **15 April**. Submitting by the deadline will help ensure your expenses can be reviewed and reimbursed in a timely manner.

➡ Please note that once the deadline has passed, even late submissions may not be approved, so we strongly encourage you to submit your claim as soon as possible if you have not already done so.

If you have any questions, need assistance with the submission process, or believe you have already submitted your claim, please don't hesitate to reach out. We're happy to help.

Thank you very much for your attention and cooperation.

Kind regards,

Dakota

About Copilot Memory

Copilot Memory allows your preferences and work context—such as how you would like outputs to be presented—to be saved once and then reflected automatically in future responses. You can also manage or update these memory settings at any time from the settings screen.

(Example)

Please remember these preferences for future responses.

- Use bullet points
- Keep the key points concise and summaries them in no more than three lines
- End with: “Please feel free to contact me if you have any questions 😊”

Add References to Your Prompt

/	Directly specify a file or folder	Example: "Please review /ExpenseReport2026.xlsx."
#	Quickly tag a topic or meeting	Example: "I have a question about #ExpenseSubmission."
@	Ask or request something directly from a person	Example: "@Admin, could you please explain the expense claim process?"

Read Aloud | Voice Chat | Dictation

 Copilot

- Got it  I've saved these preferences for future responses
- I'll use bullet points, keep summaries concise (within three lines), and end with your specified closing sentence

Please feel free to contact me if you have any questions 😊

Schedule a Prompt

Benefit: Automating prompts (using work-related data) lets you run them once a day, up to 15 times, so you can quickly understand project progress and outstanding tasks.

Example of a scheduled prompt for reviewing your tasks each morning:

- Please review my task list as of 8:00 am today, including Microsoft To Do, Planner, Teams, Outlook flags, and unread emails.
- Classify incomplete tasks into “due within 48 hours”, “due this week”, and “no due date”, then priorities them by importance × urgency.
- Please provide the output as ① Top 5 highest priorities (with reasons and next actions), ② blockers (who needs to be consulted and about what), and ③ a draft request message that should be sent today (addressed to @team members if needed).

Work

Draft Business Content Using Microsoft 365 Copilot

Scenario:

At 10:00 a.m. on Monday morning, you received a message from your boss:

**“The executive meeting has been moved up to this afternoon. I’m sorry for the short notice, but could you please prepare a draft proposal on the ‘Global AI Talent Development’ initiative and share it with me as soon as possible? I’d like to have a pre-meeting at 1:00 p.m. to go over it, so please arrange the meeting as well.
A rough draft is fine, but could you also put together a few PowerPoint slides (around 3–5 pages)?”**

>> Generate an initial draft from a prompt

You are a business planning officer. Please create a draft internal business document using the conditions below.

- Company name: Enjoy Learning Co., Ltd.
- Background: Expansion across Asia and North America is progressing, and the AI and digital transformation training business is growing.
- Challenge: Employee skill levels vary globally, and workforce capability development has become a management issue.
- Objective: Identify initiatives to help employees use AI effectively.

Please organize the document into three sections: Background, Current Challenges, and Direction for Consideration.

Please format the document in Calibri, 11-point font, in Word.

>> Refine and improve the text

Please rewrite above document so it is more concise and persuasive for senior leaders. Avoid overusing technical terms and keep a clear business focus.

Please revise the Word file and save it as version 2.

>> Create and organize a list or table

Please organize the “challenges” and “responses” in the document into a three-column table: Challenge / Impact / Proposed Response. Please use Calibri, size 11.

Please revise the Word file and save it as version 3.

>> Refer to web data

Please use recent web sources to investigate current trends in the education services industry. I would like to insert this at the end of the report.

Please revise the Word file and save it as version 4_WEB and Work.

>> Draft and edit emails efficiently

/ [file name] Based on this content, please draft an internal email inviting people to a 1:00 pm meeting for a pre-meeting discussion. Please refer to the president's email: "The executive meeting has been moved forward to this evening. Sorry for the short notice, but could you please prepare and share a rough draft on global AI workforce capability development as soon as possible? Based on that, I would like to have a pre-meeting discussion by 1:00 pm, so please arrange the meeting invitation." Use a formal but positive tone and keep the message concise. Please clearly state that @admin, @lisa, and @dakota are required attendees. At the end of the sender name, add "Adomin (Acting President)".

>> Create a presentation

/[file name]

You are a business planning officer. Please create a draft PowerPoint presentation for internal use on initiatives for global AI workforce capability development to be shared at the executive meeting (moved forward to this evening).

Requirements:

- Three slides in total (slide title + bullet points)
- Structure: Background / Current Challenges / Direction for Consideration
- Tone: formal but positive

>> Refine the presentation

Please refine the three slides you have just created so they support executive decision-making more effectively.

- Add a one-line "Conclusion" at the beginning of each slide
- In "Direction for Consideration", clearly show three recommended next steps (for example: target audience, development approach, and KPI)

Research Tool Agent

Scenario:

Now that the initial draft is in place, it is time to strengthen the content. As an additional task to reinforce the market-trend evidence for the executive meeting, we decided to use the Research Tool Agent.

>> Strengthen your content with an intelligent assistant specialized in research and analysis

Situation: We are preparing the attached report to support global AI workforce capability development. We would like to briefly show "how leading organizations are approaching this", which is something senior leaders will care about.

Goal: Compare representative organizations and industry initiatives across North America, Europe, and Asia, and identify common patterns in target audience design, development approaches, and KPIs.

References (sources): Limit sources to official company announcements, annual reports, recruitment/training pages, and reliable third-party reports. Please do not speculate.

Expected output: ① Comparative table (organization / region / initiative overview / target audience / approach /

KPI examples / source) ② Top 5 insights (for executives, with the conclusion first) ③ Key discussion points to apply to our organization (10 questions for consideration).

Analyzing and Visualizing Data for Decision-Making

Scenario:
To insert internal adoption results and their impact as reference material, we decided to analyze the results of the internal survey.

>> Data analysis in Excel Copilot Chat

Please identify the cases with the largest difference between workload before AI adoption (2024) and workload after AI adoption (2025), then group the common AI use cases and Copilot usage scenarios into patterns and insert them into Sheet3. Please use Calibri for the text font.

- 💡 Note 💡
- ☑ Please identify as many patterns, trends, and key insights as possible from this table and insert them into SheetX.
 - ☑ Please explain what this formula means.

<Data Analysis – Part.2>

You are a business analyst. Using this table, identify the biggest profit leaks and why they happen.

- 1) Create a “Profit margin” column (Profit/Amount) and flag negative-profit orders.
- 2) Build a waterfall-style explanation: which Category/Sub-Category/Payment Mode combinations contribute most to total loss.
- 3) Provide 3 “fix ideas” with estimated impact (e.g., stop-loss rule, payment-mode policy, pricing/shipping adjustment).

Output: A) Top 5 loss drivers (with numbers) B) Root-cause hypotheses grounded in the data (no speculation beyond what the table supports) C) Recommended actions + what data we should collect next to validate

Find anomalies and decision rules from this dataset. - Detect outliers in Profit and Profit margin (both very high and very low). - Explain what’s unusual about them (Category/Sub-Category/PaymentMode/Quantity patterns). - Propose 5 operational rules (if-then) to prevent negative profit orders, with examples from the data. Return the rules as a short policy list I can share with Sales and Operations.

Create an executive-ready insight summary from this table. - One-sentence headline (what’s happening) - 3 bullet insights with numbers - 1 risk (what could get worse) + 1 opportunity (quick win) - A simple action plan: owner / action / deadline (assume: Sales, Ops, Finance) Keep it concise and persuasive.

Scenario:

Using the internal survey results and benchmark data available on the web as reference points, we decided to identify deeper insights and additional opportunities, and add them to the Word file titled "Organization-wide Development of AI-Enabled Talent (Executive Decision-Making Summary)."

>> Prompt for the Analyst Agent

As we progress with global AI workforce capability development, we are preparing the attached Word report for an executive meeting. In addition to the internal survey data in Excel, please also use benchmark data available on the web to identify deeper insights and further opportunities. We would like to add this to the Word file titled "Organization-wide Development of AI-Enabled Talent (Executive Decision-Making Summary)".

Collaboration: Copilot Notebook

Key features of Copilot Notebook

- You can limit references to selected files or pages only, which helps produce more accurate AI responses.
- You can summaries, compare, and analyses across multiple documents.
- Results generated by Copilot within the notebook can be saved and built up as pages.
- Your work context is retained over time, and AI responses can evolve as information is updated.
- You can manage separate notebooks for different projects or purposes.
- Adding only highly relevant materials can lead to more reliable outputs.

Requirements for using Copilot Pages

- You can only reference files you already have permission to access.
- A Microsoft 365 Copilot license is required.

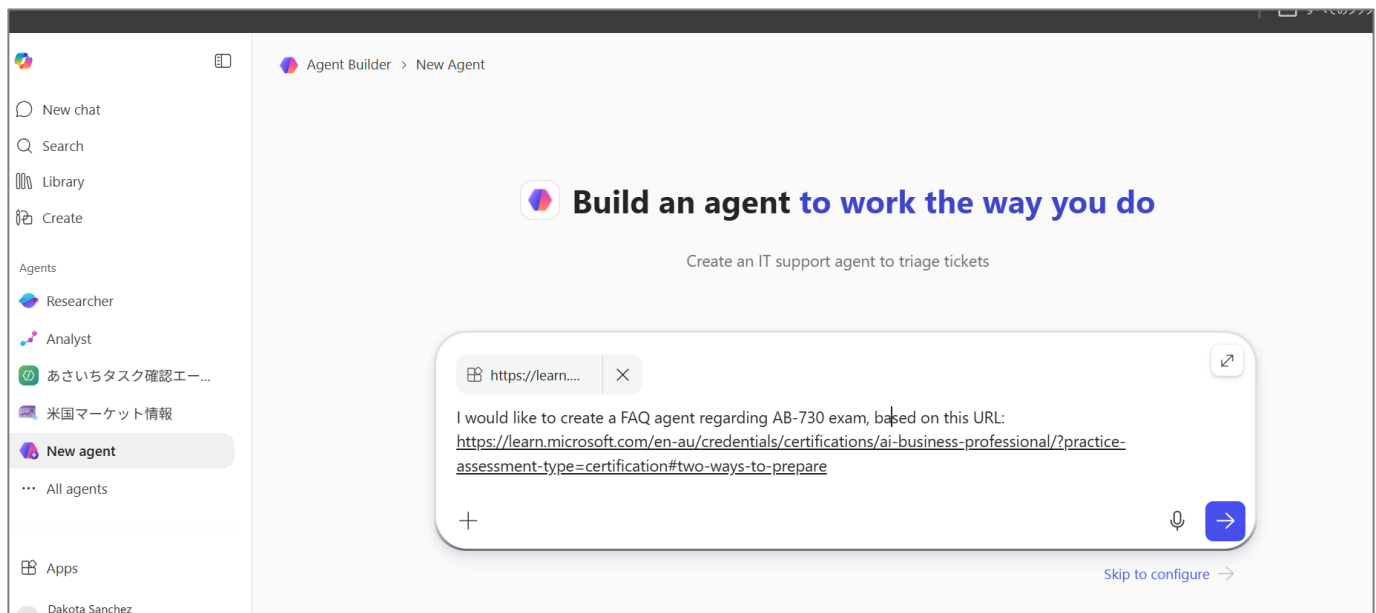

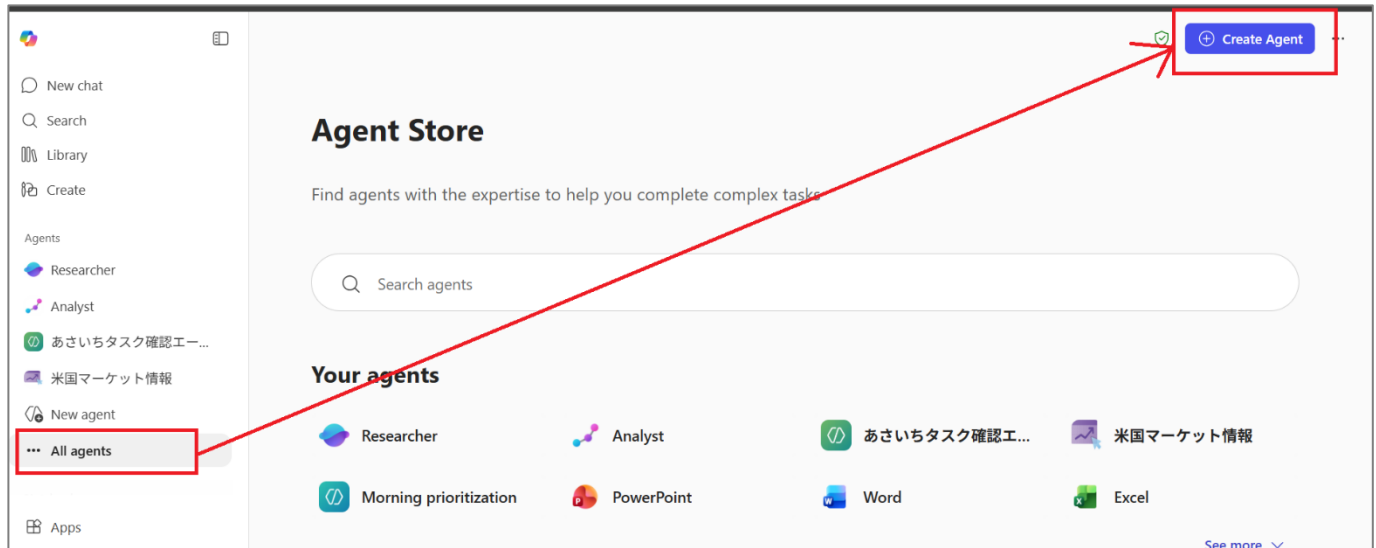

Collaboration: Copilot Pages

Key features of Copilot Pages

- Multiple users can co-edit in real time.
- Autosave helps keep work secure and up to date.
- It integrates seamlessly with Word, Excel, PowerPoint, and other Microsoft 365 apps.
- Feedback and communication can happen more smoothly.
- It can also be accessed from mobile devices, so you can work flexibly across places and times.
- Using comments and mentions proactively can strengthen communication within the team
